Box Scraper

- 1) Remove the 3 shovels off the back row of shanks.
- 2) Install the blade by fastening it in front of the 3 shanks in place of the shovels. (Only the outside 2 shanks fasten to the blade with bolts. The center shank is only used for back support.)

Helpful hints:

- a) The front 4 shanks assemblies act as scarifiers, breaking up the harder surfaces allowing the blade to drag the material to be leveled.
- b) By adjusting the hitch height you change how much the scarifiers dig. Experiment with this to get optimum performance in your conditions.
- c) Different sizes of shovels can be used on the front four shanks. 7" shovels come as standard equipment on the Quadivator but you may want to use the spikes for e.g. in hard ground conditions.
