Potato / Vegetable Digger

- 1) Remove the centre shank assembly from the back row of the Quadivator.
- 2) Spread apart the center two shank assemblies.
- 3) Remove the shovels of the center two shanks.
- 4) Install the digger in place of the shovels that were removed by spanning the digger across the center two shanks.
- 5) Flip the harrows forward into their transport position.

Helpful hints:

- a) Potato / Vegetable Digger works best when used in conjunction with the Quadivator Hilling attachment.
- b) If the ground gets hung up on the fingers adjust the fingers by bending them apart and down.
- c) If the potatoes or vegetables get buried, adjust the fingers closer so that the potatoes or vegetables don't fall between the fingers before the ground gets a chance to go through first.
- d) Best results are achieved in lighter soils.
