Tandem Disc

- 1) Remove the shank assemblies from the Quadivator.
- 2) Remove the hitch pole from the Quadivator frame.
- 3) Set the Quadivator frame over top of the tandem disc sub frame so that the front hitch pocket of the Quadivator is directly behind the front pocket of the tandem disc.
- 4) Slide the hitch pole through the first pocket of the tandem disc into the front pocket of the Quadivator and finally into the back pocket of the Quadivator.
- 5) Secure both the hitch pole and the tandem disc unit together with the hitch bolt.

Helpful hints:

- a) Be sure that the electric actuator is adjusted in its clamp assembly so that when you lower the tandem disc unit into the ground, the tires do not touch the discs.
- b) In heavy trash areas, the harrows should be in their transport position to prevent plugging.
- c) Be sure the tandem disc unit is leveled to the ground when in the working position. This can be adjusted by raising or lowering the hitch clevis.
